NGEN

Visual identity

A C++20 game engine for space simulation.

Brand standards and implementation assets

Brand foundations

NGEN is a C++20 game engine for space simulators, with a focus on space MMOs.

PRIMARY DESCRIPTION

NGEN

A C++20 game engine for space simulation.

The Balanced mark

The stepped joint suggests engineered components. Two violet wakes flank the diagonal, giving the mark a sense of motion.

The symbol forms the first N in the wordmark and also serves as the standalone application icon.

Product

Write the name as NGEN in headings, UI, and prose.

Audience

Lead with the engine and its use for space simulator development.

Voice

Use concrete terms. Describe verified features and plans separately.

Logo system

Use the approved wordmark for product headers. Use the standalone N where space is limited.

PRIMARY / DARK

PRIMARY / LIGHT

MONO WHITE

MONO INK

Descriptor signature

Use the signature for an audience meeting NGEN for the first time. Use the shorter wordmark in a compact header.

Clear space and size

Reserve one N upright of clear space around the artwork. Measure from the visible edges.

Digital minimums

144 px	Wordmark width
220 px	Signature width
24 px	Standalone icon canvas

Use the favicon tile at 16 px. Fine joint details resolve more clearly at 24 px and above.

Placement

Keep the wordmark horizontal and proportional. Keep the custom N inside the wordmark. Use a quiet field with enough contrast and switch to monochrome for single-color applications.

Avoid stretching, adding outlines or shadows, and placing busy linework inside the clear space.

Core palette

Use the theme-specific wordmark. The cyan uprights and violet joint and wakes identify the mark in both modes.

DARK

Field
#0E222C

Wordmark
#DDF3F8

Signal cyan
#63DDF8

Wake violet
#B6A5FF

LIGHT

Field
#EAF8FB

Wordmark
#173B4B

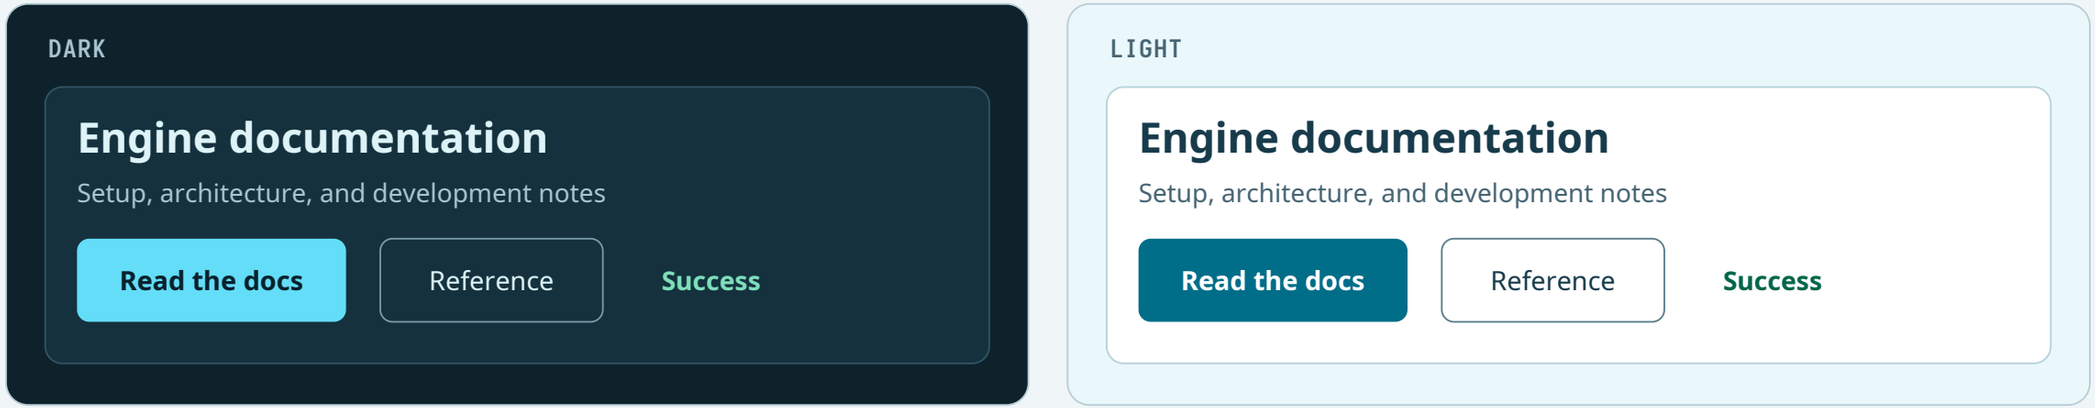

Signal cyan
#006D89

Wake violet
#5B45B4

Use the approved SVGs on backgrounds near the reference fields. On other surfaces, check contrast and use a monochrome variant when needed.

Website themes

Use semantic tokens to keep text, controls, and status legible as the page changes theme.

CONTRAST ON REFERENCE FIELDS	DARK	LIGHT
Text / page background	14.22:1	10.95:1
Muted text / raised surface	6.11:1	5.33:1
Action text / accent fill	10.48:1	5.92:1
Action text / hover fill	11.87:1	7.64:1
Control outline / raised surface	3.64:1	3.73:1
Focus ring / raised surface	7.91:1	5.00:1

Pair status colors with labels or symbols. Keep a visible focus ring and reserve low-contrast borders for decoration.

Theme tokens

The CSS custom properties and JSON file share these values. Each CSS name starts with --ngen-.

TOKEN	DARK	LIGHT
bg	#0E222C	#EAF8FB
surface	#14313D	#FFFFFF
surface-alt	#1B4050	#DDEFF5
text	#DDF3F8	#173B4B
muted	#A9C5D0	#466473
border	#315362	#B8D2DC
control-border	#7899A6	#5C7D8B
accent	#63DDF8	#006D89

TOKEN	DARK	LIGHT
accent-hover	#89E8FA	#005B74
on-accent	#08212B	#FFFFFF
secondary	#B6A5FF	#5B45B4
on-secondary	#21163A	#FFFFFF
focus	#89E8FA	#006D89
success	#7FDFBB	#006649
warning	#FFD38A	#80500A
danger	#FFA9AC	#A52F42

Use accent for links and primary actions, secondary for violet highlights, and control-border for interactive outlines.

Typography and graphics

Use the wordmark artwork for the name. Use a system sans and monospace stack for surrounding content.

Space simulation

Documentation and engine tools

Use sans-serif text for headings and prose. Use monospace for code, units, build identifiers, and diagram labels.

```
C++20 / BUILD / TRANSFER GEOMETRY
```

Orbital schematic

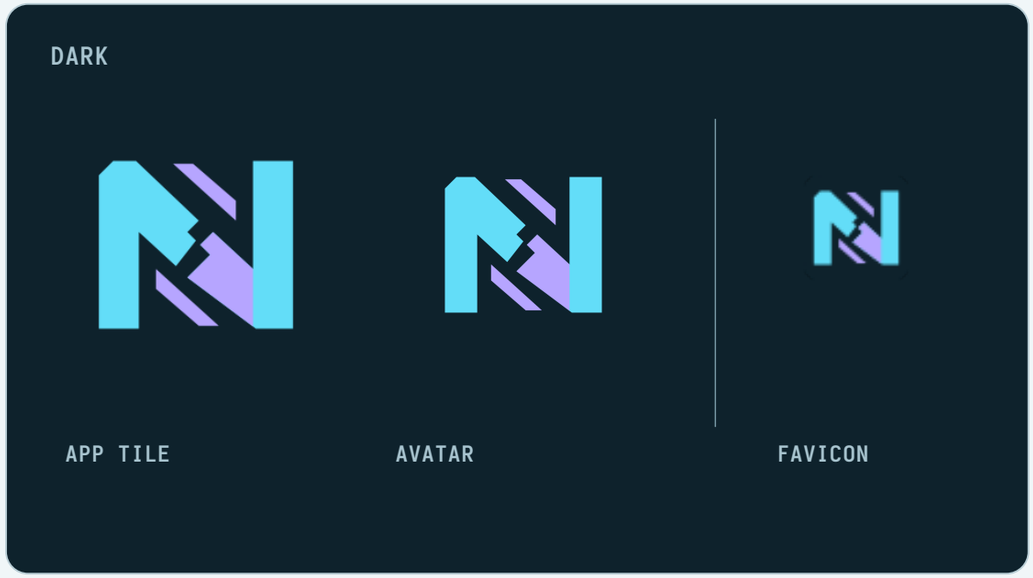

Pair fine orbit traces with sparse nodes and reference ticks. Put the mark on a quiet field so the diagram stays secondary.

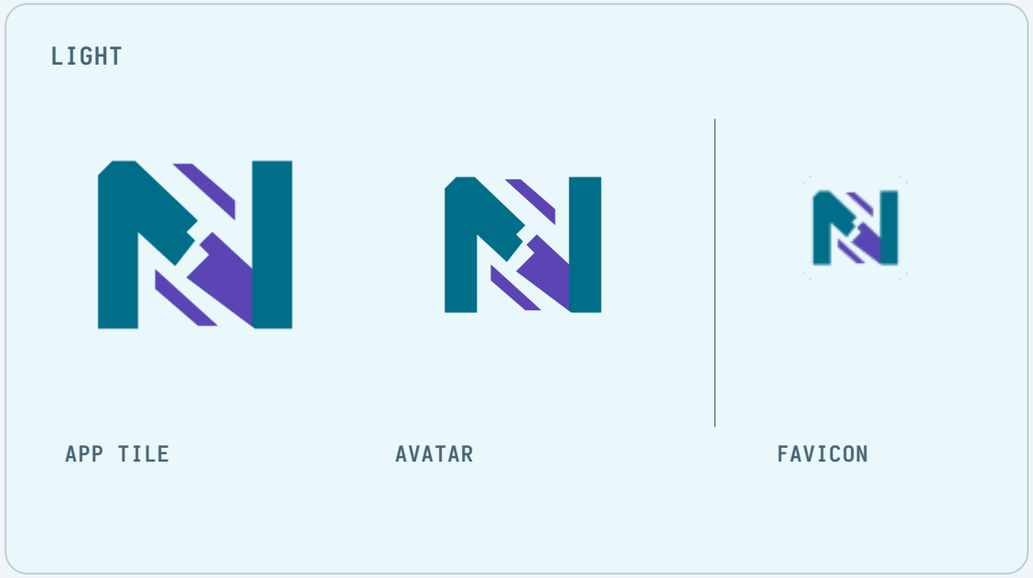

Use the supplied outlined logo files to keep letter shapes consistent across platforms.

Icons and avatars

The standalone N connects the brand across application launchers, favicons, and profile images.

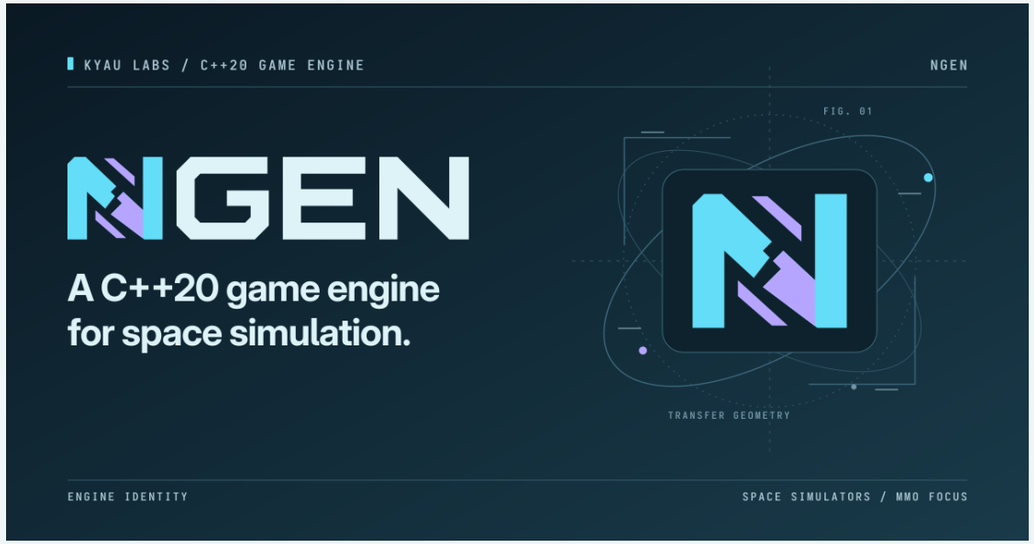

Standalone mark	Transparent SVG and PNG. Use it in compact UI or alongside unrelated text.
Application tile	Opaque square with room for platform masking. PNGs from 32 to 1024 px.
Avatar	1024 px square with a centered mark designed to survive a circular crop.
Favicon	SVG plus fixed-theme PNG and multi-size ICO. Test at 16 and 32 px.

Social graphics

The Open Graph cards put the engine name and category first, with the orbital schematic as context.

OPEN GRAPH / DARK

OPEN GRAPH / LIGHT

Link preview

`1200 x 630 px`

Select one theme per page and publish the PNG at an absolute URL.

Profile banner

`1500 x 500 px`

Check the crop in the destination preview before publishing.

Profile avatar

`1024 x 1024 px`

Use the matching theme to pair with the banner.

Implementation

Use the SVG masters in the product and documentation. Use the PNGs for publishing and platforms that need raster files.

THEME SETUP

```
<link rel="stylesheet" href="/brand/web/ngen-theme.css">
<link rel="icon" href="/brand/icons/favicon/favicon.svg">

<!-- Force a theme on the html element when needed. -->
<html data-theme="dark">
```

The CSS follows the system preference by default. Set data-theme to light or dark for an explicit selection and load the matching wordmark.

Open web/palette-preview.html for a local theme preview. Use web/open-graph.example.html as the metadata starting point.
